

JOBSITE SAFETY TALK

"ON-SITE TRAINING YIELDS A SAFE, PRODUCTIVE WORKFORCE"

22-18

June 6, 2022

NEW WORK SITES

Ohio's construction markets are on a hot streak! This is good for our contractors seeking work, but it is challenging for our workers who must adapt to many different safety challenges on many types of projects. Our safety managers must remain vigilant as they prepare employees for transition to new work sites. Here are some helpful tips for your employees as they make those moves. When you move from one work area to another, you may encounter an entirely different set of hazards or site conditions. When you arrive at a new site, immediately ask your supervisor or another employee at the site if there are dangerous conditions or situations of which you should be aware.

SAFETY TIPS

- Learn all work site rules
- Learn all signals, who has signaling responsibility and who has the right-of-way in each situation
- Learn the meaning of all flags, signs and markings
- Know procedures for a disabled machine
- Be aware of indoor clearances and weight limitations
- Check to see that all enclosed areas are properly ventilated
- Check the conditions of haul roads
- Know the direction of travel on haul roads
- Identify holes, obstructions, mud and/or ice
- Be aware of thick dust, smoke and fog
- Locate all utility lines
- Always ask your supervisor if you are unsure about a new worksite practice
